

IMAGECAST REMOTE

Dominion's ImageCast Remote and Uniformed and Overseas Citizens Absentee Voting Act (UOCAVA) solution offers a secure and efficient method for voters with disabilities, military and overseas citizens, to receive, mark, print and return their ballot to their local elections office.

Secure encryption and data integrity practices ensure security and transparency of the ballot process while preserving the privacy of UOCAVA voters.

SIMPLE

Fully integrated into the Democracy Suite® platform, eliminating the need for a separate vendor or election project.

FLEXIBLE

Designed to fit the specific needs and preferences of each jurisdiction. Responsive user interface compatible with mobile phones, tablets, and computers.

EFFICIENT

Ballots returned by Remote/UOCAVA voters are processed, without needing duplication, on any ImageCast® tabulator.

SECURE

Designed to meet the highest level of auditability, transparency, and security, providing voters with complete confidence in the voting system.

Prop 28
Vote for Yes

Access - Voters request to vote remotely through their county election official, and receive an e-mail with a unique PIN to access their ballot through a secure online portal.

Personalize - Once logged in on their preferred device and personal assistive technology the voter selects their language of choice and is presented with the correct ballot style to make selections.

Choose - The voter is guided through the ballot contest-by-contest, marking selections utilizing their personal assistive technology. Changes to selections can be made on each contest page and allows the voter to react to any alerts for blank or under-voted contests.

Review - At any time, the voter can select the Review button to see their current ballot selections and any alerts for blank or under-voted contests. Updates are made by simply clicking on the contest, deselecting the previous choice, and making a new selection.

Print - Voters select print and are prompted for a final review. Once satisfied, the voter prints a condensed ballot with a 2-D barcode for tabulation and a printed summary of the voter's selections. A cover letter with submission instructions and any additional documentation required by their county election official automatically prints with the completed ballot.

Mail - Completed ballots and documentation can be returned by mail or personally delivered to the vote center for tabulation.

All UOCAVA ballots are scanned in the same manner as all other submitted ballots, and include an AuditMark verifying the system tabulation of the voter selections.

Dominion's UOCAVA solution is fully compliant with Voter's Choice Act requirements and WCAG 2.00AA accessibility standard, and supports the use of JAWS and NVDA screen readers.
